

# Lower the Screen on Bugs.

**FlexScreen Roll-up Models are the easy way to keep birds, flies, moths, mosquitoes, gnats, wasps, and other insects out!**

Available with an electric motor, manual chain hoist, or spring action, these doors offer fresh air, better light, increased security, employee comfort and improved productivity.

# When Roll-up FlexScreen is down it keeps bugs and other pests out of warehouses, production facilities and food processing plants while letting in sunlight and fresh air.

FlexScreen roll-up doors are held secure on the sides by a safety striped guide track with a flared top for easy operation. They can be ordered for inside-standoff, in-jamb, or face-of-wall mounting.

The in-jamb mount has a vinyl flap to seal the top gap from insects.

A vinyl strip is attached to the guide track by hook and loop fastener on the inside standoff mounted version to seal out pests. A brush is attached to the bottom of the industrial door to seal at the top when the door is open. Installation on this version is made easy with adjustable guide track clips and slotted head plates.

The horizontal safety stripe allows workers to instantly check for the screen in the down position.

Screens are available in several colors. Replacement screens, when needed, are easy to install.

## Quality

- Safety strips and stabilizer bars are sewn into the screen for visibility
- All models are designed and tested for durability
- Sturdy extruded aluminum guide tracks are striped for safety

## Practicality

- Keeps out insects and birds, reduces dust and wind, improves sanitation
- Lets in fresh air and light
- Easy to order, install and maintain

Brush Seal

Extruded Aluminum guide track with safety striping

- Improves employee comfort and productivity
- Increases security — a visual and physical barrier to reduce theft and pilferage

## Worried about Wind Load? Get the FlexBarrier Advantage.

- Horizontal 3/4" Fiberglass Stiffeners with sewn-in side webbing between to provide ultimate reinforcement
- Optional 4" track — extra depth prevents blowouts
- 1" wide track — narrow gauge for less give
- Available extra weight in bottom — sand or extra chain

## Mounting Options:

In-Jamb Mount (in-tube only) (left)  
Inside Standoff Wall Bracket (right)

## Motorized, Spring and Manual Options:

**Motorized** This model comes with an In-tube motor (ITM) or an External Continuous Duty Motor (ECD) designed for frequent opening and closing. (ITM not recommended for opening more than 8 times per hour.) The door is operated from a rocker switch which is provided. Both motors have up and down limit switches. The ECD model has an emergency chain hoist.

ITM

ECD

**Spring Tube Model (STM)** This model rolls on a spring action tube and has two handles to manually pull screen into the down position. Two latches are provided to hold the door securely down. The spring assembly comes heavily lubricated.

STM

## Chain Hoist Model (CHM)

This model operates like a traditional chain hoist roll-up loading dock door.

CHM

## Accessories

The optional FlexTG (Track Guard) provides tough, attractive protection for vulnerable door tracks. Simple installation — FlexTG anchors directly to the floor through pre-drilled holes with anchors. Made from 1/4" steel plate to withstand maximum impact. FlexTG is available in a 48" height. Order it with your door to protect your track guides.

FlexEC (Exterior Cover) is an attractive and protective faceplate for exterior use. The ends are sealed to provide an extra level of protection for the door roll. FlexIC and EC are both made of heavy gauge steel.

FlexIC (Interior Cover) is an attractive faceplate as well as a protective valance for the door roll.
